Engine & Transmission Covers – Big Twin

THE BURST COLLECTION

Split with tradition. The Burst Collection takes your ride in a new hard-edged direction. With a rich mixture of tuxedo black and machined aluminum finishes, each component in this complete collection is designed to tie the look together. The combination of contrasting edges and the light-enhancing machined pattern makes a powerful visual statement that complements classic and contemporary customizing styles. The Burst Collection components create an impact all by themselves, but can also be seamlessly combined with Edge Cut and other gloss black accessories to complete the look.

A. THE BURST COLLECTION ENGINE COVERS

The Twin Cam engine is the focal point of your motorcycle, so dress it with pride. Burst Collection Engine Covers set the stage for a complete custom look. We start with beautifully polished cast or billet parts that are engineered to fit the bike perfectly. Then we apply a rich "tuxedo black" anodized finish and meticulously machine away the surface to expose the satin aluminum below. Start with a couple of components, or go all the way. Oil Coolers – Big Twin

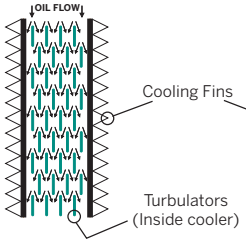
PREMIUM OIL COOLER KITS

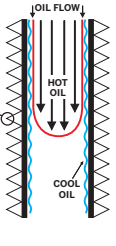
This oil cooler was designed specifically for Harley-Davidson® to out-perform all other coolers in the industry. The cooler features a unique "Turbulator" system that evenly distributes oil across the cooling chambers. The air fins are designed to efficiently dissipate heat. The oil cooler has been designed to simplify installation and enhance performance. The large heat exchanger provides excellent cooling efficiency. The kit features a one-piece adapter plate with integrated thermostat that allows oil lines to connect to the oil filter bracket. Thermostat activates at 185°F (85°C). Kit comes complete with mounting hardware and precut oil lines.

Inside View of Premium Oil Cooler with Turbulators



Turbulators disperse and mix oil inside cooler to provide more efficient cooling capabilities. The cooler oil is not allowed to remain along the boundaries of the flow tube as in conventional coolers.

Inside View of Conventional Oil Cooler without Turbulators



Coolers without the Turbulator system allow oil to flow only in a straight path. Oil does not mix and the cooler oil remains along the outer boundaries, while the hotter oil remains along the center path of flow. Without the mixing effects of the Turbulators, the conventional oil cooler provides less efficient cooling capabilities.
